

### **LipoSelection®**

LipoSelection® is a technique of body contouring, eliminating fat and reshaping areas where the patient would like to lose weight, such as waist, thighs, buttocks, arms, neck or chest. The LipoSelection® VASER Lipo technique targets specific areas of the body, using ultrasonic waves to break up and separate fat cells for removal while leaving vital tissues unharmed.

Unlike traditional liposuction, VASER Lipo results in less trauma, faster recovery, minimally invasive procedures delivered in a clinical setting and smooth, tight results.
